

Application No. 10/568,768 (Kilkis, Siir) Art Unit 2837 Amnt. cont. Page 2/15

SPECIFICATION:

Page 1, please add the following new paragraph after paragraph 0005:

Two other US patents, namely 5,689,078 (1995) issued to McClard and 5,907,116 (1999) issued to Hertha exemplify the problematic concerns in the prior art. McClard provides a method to produce music from color models. The conversions depend on user selections of pre-indexed array values of colors to music parameters. Hertha assigns optical images of starlit skies with twelve discrete, acoustical tones. The association further depends on the make-up of stars and planets. Both rely on discrete, artificial associations or indirect selections that are user dependent.
